ThemeBot

PRICING & FEATURE PLAN · 3 OCTOBER 2026

Two versions, one engine

A **desktop app** that agencies install and run on their own AI account, and a **web app** in the browser where freelancers and studios buy builds from us. What each one includes, what it costs, its strengths and weaknesses, and how we keep both up to date.

Desktop · agencies

from **$1,495** once
+ yearly updates

Web app · studios

from **$79 / month**
builds included

Desktop is premium

unlimited builds on their own AI · automatic store setup

Prices are our proposal, for review. **PLANNED** marks features that aren't built yet. Same engine and quality in both versions.

Who each version is for

Desktop app

Agencies that build many stores

RUNS
Installed on Windows, Mac or Linux

THEY PAY
One-time licence + yearly updates

AI
Their own AI account (subscription or key)

THEIR FILES
Stay on their own computers

READY
First version now · full version January

Web app

Freelancers and small studios

RUNS
In the browser, nothing to install

THEY PAY
Monthly plan with builds included

AI
Included in the plan (or their own AI key)

THEIR FILES
In their ThemeBot account

READY
Beta in about 4–20 weeks (pace decides)

Same engine, same quality. The difference is who runs it, who pays for the AI, and how much is automated.

Pros and cons of each version

Desktop app
for the agency

FOR THE CUSTOMER

- \+ No per-build fees: builds run on their own AI plan
- \+ Store, app and keys set up automatically in their own browser
- \+ Client files stay on their own computers
- \+ Several builds at once; no waiting in a queue
- − Must install it, plus Chrome and their AI tool
- − Computer must stay on while a build runs (hours)

FOR US

- \+ No AI cost: high margin on every licence
- \+ Large upfront payments fund the web app
- − Support across three operating systems
- − Updates reach people only when they restart
- − Build method sits on their machine until the cloud brain (Jan)

Web app
for freelancers & studios

FOR THE CUSTOMER

- \+ Nothing to install; works on any computer
- \+ No AI account needed; start in minutes
- \+ Builds keep running when their laptop is closed
- \+ Easy to share with a team in the browser
- − Limited builds per month; extra builds cost more
- − They create the store first, then connect it

FOR US

- \+ Predictable monthly revenue
- \+ Everyone always on the latest version
- \+ Build method never leaves our servers
- − We pay the AI and servers for every build
- − We hold customer data: privacy and backups matter

What each plan includes

Early access to new features PLANNED	—	—	—	✓
Support	Email	Email	Priority	**Priority + direct line**

* Limited only by their own AI plan and computer. Quality checks never use up a build. Seat and build numbers are proposals.

Why agencies pay more for desktop

The web app sells builds. The desktop app sells a production line the agency owns.

Unlimited builds
Runs on their own AI plan, so there are no per-build fees. The more stores they build, the cheaper each one gets.

Automatic store setup
Creates the Shopify store, the app and its keys in their own browser. Web users have to do this themselves.

Several builds at once
Run 2–4 client stores at the same time on their own computers, with no shared queue.

Client work stays in-house
Source sites, themes and reports stay on the agency's computers, which agencies with strict clients need.

Built for teams
Seats per person, client history across every project, and cheap extra seats.

White-label client reports
Before/after PDF reports with the agency's own logo for their clients. **PLANNED**

Early access
New features reach the agency channel first, and founding agencies help shape the roadmap. **PLANNED**

They own the tool
A one-time licence keeps working, even if they stop paying for updates.

Break-even for an agency: at 10 stores a month the web Agency plan costs about $6,000 a year. A desktop licence is $2,495 once (+$795 a year from year two): it pays for itself in about 5 months, or about 8 counting their own AI plan.

6 · KEEPING BOTH VERSIONS UP TO DATE

How we control versions

One engine and one version number for both products. Every update is tested once, then reaches desktop and web together.

Updates follow the licence

Desktop updates are included while the yearly plan is active. If it lapses, the app keeps working on the last version they had.

Safety updates for everyone

When Shopify or the AI provider changes something, we can require a minimum version so no one runs a build that would fail.

One code base, plan switches

Both versions share the same code; each plan simply switches features on or off. No separate copies to maintain.

Web rolls out gradually

We can send a new web version to a small share of users first, then everyone, and undo it in minutes if needed.

The engine improves for all

From January the build method runs on our server, so improvements reach every desktop and web user at once, without an app update.

Clear release notes

Every version gets a short "what's new" inside the app and a changelog page.

7 · RECOMMENDATIONS

What we suggest

Sell desktop first

It is ready first, costs us nothing in AI, and the founding licences fund the web app.

Cap founding licences at 10

Early agencies get a lower price for feedback and patience. Scarcity helps sales.

Launch web credits only when cheap

Open paid web plans once a build costs us about $20 or less, so every plan earns about 50%.

Keep the gap clear

Automatic store setup and unlimited builds stay desktop-only: that's why agencies pay more.

Decisions for you

- Approve or adjust the prices and the build/seat numbers
- Updates included for 1 year, then $495 / $795 a year: keep or change
- Offer web seats to desktop customers as a bundle later?

In short: desktop is the premium tool agencies own and run on their own AI. Web is the easy monthly option. One engine, one version number, and updates reach both.
